Installing Ubuntu Server

Just boot your server from this CD. The 'go back' option provides non-default configuration possibilities, such as assigning a static IP address, or usage of LVM, RAID or iSCSI volumes. You can find more information at help.ubuntu.com or www.ubuntu.com/business

Why choose Ubuntu Server?

- Ubuntu Server is streamlined so you can just install the bits you need, quickly.
- Ubuntu is the most popular operating system in large public cloud infrastructures.
- Ubuntu is genuinely freely available to all users, with free security and maintenance updates.
- Ubuntu is funded by Canonical Ltd which sells optional services for its deployment, installation, management and support. Customers only pay for the services they want. There is no registration, licence or subscription required to use Ubuntu.
- Businesses make substantial cost savings by running their common and low-risk workloads, like test-and-development, web servers and file servers, on Ubuntu.
- Ubuntu Server works with the most popular server hardware from the world's leading manufacturers. It's certified on many models; see www.ubuntu.com/business for details.
