The Many Benefits:

→ Complete.

Applications for web browsing, instant messaging, email, multimedia, and office applications as well as a complete repository of software to install are all included.

→ Simplicity.

Ubuntu is easy and feels natural to use. New computer users will learn to understand it intuitively and users from other systems will find it familiar and understandable.

Lots of support is available for free and volunteers from around the world are ready to answer any questions you, may have, at <http://ubuntuforums.org/>.

→ Freedom.

Ubuntu is, and always will be, including all updates to come, completely free. Free to use, free to share, free to do whatever you want with it. Ubuntu is owned by you, the general public.
