Your free alternative!

Now there is finally a user friendly and free alternative to Microsoft Windows. Tired of viruses, spyware, and expensive upgrades? Then Ubuntu may be the solution for you and your computer!

What is Ubuntu?

Ubuntu is a free alternative to Windows which is already being used by over six million people around the world. Ubuntu was created in 2004 by the South-African entrepreneur, investor, and astronaut Mark Shuttleworth with the vision of creating a version Linux for human beings. Today Ubuntu is a well built operating system and a strong competitor to both Microsoft Windows and Apple's OS-X.

Easy graphical user interface.

Who can use Ubuntu?

Ubuntu can replace Windows for most computer users. Programs such as web browsers, document editors, photo editors, film and music players are all included with the basic installation. Thousands of applications can easily be downloaded and installed free of charge. Unless you want to play the latest games or have a need for Windows only programs Ubuntu may be the best solution for you.

Lots of games, entertainment and multimedia.

How easy is Ubuntu to use?

Ubuntu is very easy to install and use. Only normal computer experience is required. Accessories such as printers, cameras and mp3-players are usually auto detected without any problems and work straight out of the box. Switching from Windows to Ubuntu may be a small culture shock; as would be switching from Windows to Mac since there are some functional differences. Ubuntu can even be run straight from the CD, allowing people to test it without the need for installation.

Browse the web, edit documents and be productive in a free and virus free environment.
