Notes about proposal2 and proposal3 from Michel Renon :

The idea is to follow David's remark : we have to propose designs that don't change (too much) the UX phone.

So I made 2 variants :
proposal2 : technically, it should be simple to implement : duplicate 4x the main view, inside an horizontal scroller.

proposal3 : one more change : add a view on top that shows daily forecast.
When user clicks on one day, it updates the 4 views below.

The tablet version has no special layout, only center the daily forecast for proposal3.

These proposals may give us more time to work on next version designs.
