ubuntu

Définition de Logiciel Libre

- Un Logiciel / Programme est dit libre si:
 - Le code source est disponible (open source)
 - Vous avez la liberté de l'utiliser
 - Vous avez la liberté de le distribuer
 - Vous avez la liberté de le modifier
- FOSS: Free Open Source Software

Qui participe dans les FOSS

- La communauté
- Organisations / Associations: Mozilla Foundation, Debian, Gnome, KDE, ...
- Les entreprises
 - Qui dit entreprise dit argent: comment une société peut gagner sa vie alors ?!!

Entreprises et FOSS

- Exemple : entreprise 'E' vend un logiciel 'L'
 - Elle a 20 Clients dans le pays, donc 20 contrats de maintenance
 - Elle décide de fournir son produit en open source: le nombre de sociétés qui utilisent le logiciel 'L' passe à 1000. si 5% veulent un assistance technique → 50 contrats de maintenance !

- Exemple : entreprise 'E' vend un logiciel 'L'
 - le logiciel L est open source → d'autres sociétés (SSL) peuvent fournir aussi le même service de maintenance:
le nombre des utilisateurs passent de 1000 à 4000, uniquement 2% veulent l'assistance de l'entreprise 'E' → 80 contrats de maintenances
 - Programme partenariat
 - La qualité du logiciel 'L' s'améliore:
 - 4000 utilisateurs: plus de bogues détectés et corrigés
 - Plusieurs SSL: développement continue

Services

Canonical offers a full range of commercial services to help businesses benefit from Ubuntu and Free Software. Whether you need special engineering, support or training our team is here to help. The full range of our services include:

Custom engineering services

Companies around the world have discovered how they can benefit from Linux a flexible and open standards focused operating system. Our developers provide custom development services to help companies discover and benefit from that power themselves. From special versions of Ubuntu, to architectural ports and full software development our team of experts will deliver a solution to meet your requirements. [Read more >>](#)

Support services

Our support team have substantial experience and expertise in the areas of developing, deploying and maintaining Linux systems and applications. Services include 24x7 support and professional services for Ubuntu. [Read more >>](#)

Certification

Our rigorous testing process ensures your hardware receives an official endorsement by the Ubuntu project, backed by a validation and testing process conducted by Canonical to ensure compatibility with Ubuntu. [Read more>>](#)

Partners

You are here: [Home](#) » Partner programme overview

Canonical Partner Programme

The Canonical Partner Programme is designed to deliver open source solutions and partner's technologies to Ubuntu users globally, providing the choice and quality that real world challenges require.

Partners range in size from global technology companies to local consultancies that will support a small implementation of Ubuntu.

Locate a partner

Partners provide software, hardware, implementation services and training base on Ubuntu. [Locate a partner](#)

Become a partner

The partner programme is for businesses that are providing solutions based on Ubuntu. There are five separate tracks in the partner programme with some tracks having as many as three levels. These levels depend on your size, skills and experience of your organisations and the level of your commitment to Ubuntu.

In return for this commitment, you get access to sales, marketing, technical and support resources directly from Canonical.

Business partners	Technology partners	Training partners
Consultants	Hardware Vendors (IHVs)	Academic Trainers
Resellers	Software Partners (ISVs)	Commercial Trainers
Systems Integrators	System Builders/OEMs	

Exemple 3: Canonical / Ubuntu

Some of these tracks are then divided into three levels of participation :

Gold partnerships include engineering, support and marketing collaboration. These partnerships require higher revenue and support commitments, but benefit from a more strategic relationship with Canonical, and benefit from being intimately involved with Canonical's business processes and strategies.

Silver Partners have met a set of requirements set out by Canonical that demonstrate a definite commitment to promoting and developing open source technologies within their customer base and to building joint business with Canonical. These partners also receive additional marketing assistance and are eligible for technical support at reduced prices.

[Apply here](#)

Affiliate is the entry level into the programme. Affiliate Partners have access to many services provided by Canonical from technical support to marketing and communications. The entry requirements are set to enable most Ubuntu and open source focused businesses join at this level.
