

Phonedations

June 2014

14.04

- Telephony
 - USSD Support
 - Call Hold / Multi-party calling
 - Voicemail
 - Back-end Dual SIM support
 - OEM infrastructure changes
 - Code re-factoring to enable unit testing
- Core OS
 - Boot speed improvements (cut in half)
 - Daily Bootchart creation tools
 - Enhanced ubuntu-touch recovery
 - Ubuntu device tools (written in Go)
- ARM emulator

RTM

Will Do

- Media-hub (Landed, but bug fixing)
- MMS (back-end has landed but need to flush out with UI)
- Bluetooth - essential profiles
- Dual SIM (back-end)
- Airplane mode (frontend)
- Move all device specific configuration into Android system image.
- Location services
- Factory reset support
- APIs - alarms, LEDs, vibration
- Developer mode
- Landing split-greeter-mode (needed for boot animation)
- Haptics handled through usensord exposed through platform-api
- Camera audio/video recording

14.10

Will Do

- Better telephony emulator support
- Integrate media-hub into the desktop
- Better power policy
- Continuous image size reduction
- Bluetooth LE support

Might Do

- NFC
